

**Characteristics of
Los Angeles County Social Survey 1992**

Principal Investigator: Lawrence Bobo, Ph.D.

Sample: Random Digit Dial (RDD) sample of all telephone households in Los Angeles county, and RDD oversamples of African American and Asian American telephone households in Los Angeles county.

Respondent Selection: Person 18 years old or over who has the next birthday and is currently living in the household.

Field Period: February 3 through July 28, 1992

Number of Interviews: 1897

Interviews by Ethnicity:

White	625
African American	483
Latino	477
Asian American	284
Other	28

Average Interview Length: 38 minutes

Main Topics: Ethnic relations; social dominance; social distance; immigration; affirmative action; and employment.

Language: English and Spanish

Methodological Components: 1) Split ballot -- Respondents were randomly selected to answer a series of questions from one of three ballots concerning immigration and affirmative action; 2) Social distance questions -- a different series of social distance questions was asked depending on the respondent's ethnicity.

Interviewing Mode: Computer-Assisted Telephone Interviewing (CATI) System

INTRODUCTION

The Los Angeles County Social Survey (LACSS) is part of a continuing annual research project supported by the Institute for Social Science Research at the University of California, Los Angeles (UCLA). The primary purpose of the Los Angeles County Social Survey is to provide UCLA and the local community with information about the opinions and attitudes of Los Angeles County residents on a wide range of topics. The LACSS also provides UCLA undergraduate and graduate students with the experience of collecting survey research data. Each year a University of California researcher is given an opportunity to be principal investigator and to use a segment of the LACSS for his or her own research. The 1992 principal investigator was Dr. Lawrence Bobo, who is Associate Professor of Sociology at UCLA.

This year's annual Los Angeles County Social Survey was conducted between February and July of 1992. Los Angeles County residents were asked questions concerning ethnic relations, immigration, employment, and government. A random digit dial sample of telephone households in Los Angeles county was called, and interviews were completed with 1897 adult respondents. These respondents were selected in a two-stage process. First, telephone households were randomly selected. Then, one adult from each eligible household was selected to do an interview. In addition, an oversample of African American and Asian American telephone households was drawn from areas in Los Angeles county. The response rate for this survey is 45 percent. The margin of error for any given question is plus or minus 3 percentage points.

COMPUTER-ASSISTED STUDIES

Introduction

Computer-Assisted Studies (CAS), the Survey Research Center's CATI facility, was established in 1975. CAS is part of the Survey Research Center within the Institute for Social Science Research at the University of California, Los Angeles. Even though CAS's main activity is computer-based telephone interviewing, it also provides UCLA researchers with staff and resources to conduct computer simulation experiments.

Over the past 25 years, CAS has played an important role in telephone survey research. CAS staff have conducted some of the first surveys using a computer-based telephone interviewing system, and they assisted in conducting the first large state-wide survey using CATI. Other important contributions of CAS staff include regularly conducting bilingual surveys, and conducting an annual survey of Los Angeles area residents. Moreover, CAS staff have conducted hundreds of surveys, and conduct more interviews per year than most university-based CATI facilities.

The CAS originated from a collective effort between the directors of the Institute for Social Science Research (ISSR) and the Center for Computer-Based Behavioral Studies (CCBS). Dr. Gerald Shure, director of CCBS, had developed a computer-based interactive system for psychology experiments and analysis and was using the CCBS facility to conduct simulation experiments. At this time, Dr. Howard Freeman, director of ISSR, was interested in applying computer technology to telephone interviewing. Together, with their initiative, experience, and foresight, they were able to bring some of the first practical applications of computer-based telephone interviewing to university survey research.

With funds from the Russell Sage Foundation, a small survey was conducted using a CATI prototype in 1975. Shortly after developing this successful CATI prototype, National Science Foundation funds were obtained to further develop and evaluate the CATI system. To this end, researchers from UC Berkeley and UCLA came together in 1977 to develop a CATI system that would be used for a large California telephone survey. Through this groundbreaking survey, a CATI system was developed that would serve CAS for more than 15 years. Members of this collaborative effort went on to other organizations to create new CATI software and to set up CATI systems in survey facilities. Quite fittingly, CAS now uses CASES, a CATI system originally created at UC Berkeley by researchers who were key members in developing the ISSR/CCBS CATI system at UCLA.

The Telephone Interviewing Facility

The Computer-Assisted Studies facility has 16 telephone interviewing stations. Ten of these stations are fully enclosed rooms, each containing a computer terminal and a telephone with headset. The other 6 interviewing stations are in 3 enclosed rooms, with 2 interviewing stations in each room. Each interviewing telephone is connected to an audio monitor so that a supervisor can monitor interviewer performance. Each computer terminal is connected to a visual monitoring screen located in the supervisors' office. The supervisors' monitor does not carry a full image of the interviewer's screen. However, it gives the monitor enough information so that he or she can effectively use the audio monitor. The visual monitor lets the supervisor know who is logged on to the computer, which question interviewers have reached in the survey instrument, how much time interviewers spend on each question, and how long they have been interviewing a particular respondent.

The SunSPARC Computer

The CAS facility operates a Stanford University Network (SUN) SPARC workstation with a UNIX-based operating system called SunOS. CAS's 16 interviewing terminals are connected to the SPARC system through an ANNEX IIE terminal server. The server processes work done on the Falco 5000 terminals located in the 16 interviewing stations. The SunOS allows CAS to conduct multiple surveys and simulation experiments simultaneously. This computer network provides CAS with powerful programming languages and 2.2 gigabytes of disk space.

The CATI System

CAS uses the CASES CATI system from the Computer-Assisted Methods Program (CSM) at the University of California, Berkeley. CASES is a comprehensive CATI package. It provides many programs for survey research including programs for building complex survey instruments, managing cases, coding text responses, and analyzing data.

SURVEY ADMINISTRATION

Interviewer Training

Interviewers were trained in the use of standard interviewing techniques and basic execution functions on the computer-assisted telephone interviewing (CATI) system. Interviewer training was comprehensive, including at least 12 hours of instruction and practice for each interviewer. This included six hours of classroom instruction in three two-hour sessions. The main topics of these sessions were as follows: (1) the telephone survey instrument, techniques for handling refusals at initial contact, and personnel policies; (2) standard interviewing techniques; and (3) the 1992 LACSS instrument. Figure 1 is a copy of the table of contents for the "Interviewer Training Guide."

The classroom instructions were followed by practical exercises in CATI commands and interviewing techniques. These practical application sessions were divided into two main parts: a CATI demonstration with exercises; and practice interviewing sessions using the 1992 LACSS CATI instrument. While in the practice sessions, interviewer trainees were expected to read questions aloud to themselves from the computer screen, and to role-play with another trainee. During the role-playing, each trainee acts as both a respondent and as an interviewer. In addition, each interviewer trainee interviewed a supervisor. Finally, a supervisor evaluated each interviewer trainee on how well he or she carried out CATI functions and used standard interviewing techniques before the trainee was allowed to call telephone numbers from the sample. Refer to Figure 2 for an outline of the "CATI Interviewer Training Guide."

After interviewer trainees were given approval by the supervisor to begin calling, supervisors would systematically monitor their performance at initial contact and during interviews. Supervisors use standard monitoring forms to record interviewer trainee performance, and give immediate feedback to interviewer trainees who need improvement. Refer to Figure 3 for a copy of the "Interviewer Monitoring Form" used by supervisors to evaluate interviewer performance. Also, interviewer trainees were instructed to immediately contact a supervisor when they accumulated at least three refusals in a single interviewing session.

Supervisors would evaluate each interviewer trainee's performance based on the following criteria: use of CATI commands and interviewing techniques through monitoring; completion and efficiency rates; note-taking style and completeness; and attendance and reliability. Interviewer performance was monitored and progress was charted throughout the course of the entire data collection period.

Interviewer Performance and Progress

When evaluating interviewer performance, it is important not only to evaluate how well each interviewer performs his or her tasks, but also to follow interviewer performance over the duration of the data collection period and intervene to ameliorate performance which does not meet expectations. In order to evaluate overall interviewer performance over an entire survey period, it is necessary to collect the results from several different evaluations of each interviewer's behavior, and record these results over time. Evaluating interviewer performance entails evaluating three main interviewer behaviors: interviewing skills, productivity, and cooperation and responsibility. Each interviewer is expected to competently use standard interviewing techniques and CATI functions, to complete an acceptable number of interviews in a reasonable amount of time, and to be a responsible and cooperative member of the data collection staff.

Interviewing skills are evaluated by a monitor listening to interviews and scoring interviewer behavior on a monitoring form. Interviewer productivity is evaluated by calculating interview completion and calling efficiency rates. Completion and efficiency rates are automatically calculated each day and presented in the form of a report. Interviewer cooperation and responsibility are evaluated mainly by monitoring interviewer attendance. The data used to evaluate these behaviors are taken from the monitoring form, reports of interview completion and calling efficiency rates, and an attendance form.

The monitoring form provides information about the interviewer's ability to use appropriate standard interviewing techniques and CATI functions. This information is an indicator of the quality of the interview, as well as of interviewer performance. The interview completion rate measures an interviewer's success in persuading respondents to complete interviews. This is calculated by dividing the number of interviews by the sum of interviews and refusals for each interviewer. The calling efficiency rate measures how well the interviewer uses his or her calling time. This is calculated by dividing an interviewer's interviewing time by his or her total calling time. The attendance form provides information about the interviewer's responsiveness to the scheduling needs of the survey.

Each evaluated behavior is given a grade that indicates how well an interviewer is performing a particular task. Grades are separated into positive categories so that interviewers can clearly see that they have an opportunity to improve their performance (when given an unsatisfactory grade). The grading categories used in evaluating interviewer performance are excellent, adequate, and unsatisfactory (needs improvement). In order to simplify the evaluation process, grade categories are incorporated into the following coding scheme:

- S = results from the monitoring form
- P = results from interview or efficiency rates
- A = results from weekly attendance report
- N = results from text for open-ended questions or other-specify responses
- + = excellent
- 0 = adequate
- = unsatisfactory (needs improvement)

For example, "S-" on the interviewer progress chart means that the results from the monitoring form were unsatisfactory, and that this interviewer needs to improve his or her interviewing techniques or execution of CATI commands.

After a supervisor evaluates an interviewer, then he or she records the graded task on the interviewer progress chart so that other supervisors can easily see how well interviewers are doing. Immediate feedback is given when the resulting grade for any task is "-"; that is, needs improvement. Supervisors review the progress chart daily to see how each interviewer is progressing over the course of the survey period. If an interviewer is not performing up to expectations, then the supervisor works with this interviewer to improve his or her performance.

During the first week of calling, immediately after training, supervisors closely monitor each interviewer's completion rate to see how successful he or she is at persuading respondents to complete an interview. If at any time, an interviewer records more refusals than interviews, then a supervisor intervenes and attempts to identify the problem. In addition, interviewers are instructed to immediately notify a supervisor when they receive three refusals during a single interviewing session.

Shortly after all interviewers enter production (i.e., begin calling regular sample), supervisors must adjust to this change by shifting their main activities from training interviewers (in CATI commands, interviewing techniques, and personnel procedures) to monitoring and evaluating interviewer performance, and giving corrective and positive feedback to interviewers. During this next phase of supervising, supervisors are expected to keep the interviewer progress chart up to date. Supervisors are expected to review and process reports, monitor and evaluate interviewer performance, and give feedback and encouragement to interviewers.

Data Collection Staff

A total of 83 interviewers completed interviews for this survey, including 59 undergraduate students and 24 professional interviewers. The supervisory staff included 3 supervisors from the professional staff and 3 graduate students who spent most of their time monitoring interviewers. Professional interviewers completed 1326 interviews, or 70 percent of the total number of interviews. Undergraduate students only interviewed for six weeks, and they completed a total of 569 interviews.

After the data collection period, an attempt was made to obtain interviewer ethnicity. By that time it was summer vacation and most of the undergraduate students had moved or changed their telephone numbers. Consequently, interviewer ethnicity was obtained from only 31 of the 83 interviewers. Of these 31 interviewers, it was determined that 13 were white, 7 were African American, 6 were Latino, and 5 were Asian American. White interviewers completed 638 interviews, African American interviewers completed 206 interviews, Latino interviewers completed 292 interviews, and Asian American interviewers completed 165 interviews.

Interviewing Days and Times

Interviewers were scheduled 7 days a week. The following schedule represents the maximum range of days and hours scheduled.

Monday through Thursday	12:00 noon to 9:00 p.m.
Friday	3:00 p.m. to 6:00 p.m.
Saturday	11:00 a.m. to 4:00 p.m.
Sunday	11:00 a.m. to 5:00 p.m.

The interviewing schedule changed over the course of the data collection period according to student interviewer schedules and workload needs.

Calling Protocols

Potential household cases introduced into the sample were called a minimum number of times before they were assigned a final disposition code. Non-working numbers, businesses, and other non-household cases, by contrast, were quickly given final codes and taken out of the calling process. Household and potential household numbers were called until they were either completed or called a specific number of times. The protocols for active potential interviews are as follows:

- o A no-contact case is defined as a case where no one ever answered the telephone. These no-contact cases included no answer, busy, and answering machine dispositions. Each no-contact case was called a minimum of twelve times on different days of the week and times of day before it was given a final disposition code.
- o At least three call back appointments were arranged with someone, and the call backs were made at the appointed times, before a case would be considered for finalization. Multiple call backs would usually be given a final disposition code of persistently unavailable. However, after reading interviewer notes, some multiple call back cases were finalized as refusals. Before a case would be considered for finalization, it was called back a minimum of six times and maximum of thirty times.
- o Cases resulting in a refusal were called back again unless the refusal was firm or hostile (firmness of refusal was evaluated by supervisors based on criteria given to them during training). Cases with a final disposition of disconnected or not-in-service were confirmed by calling the telephone number again.
- o An average of approximately 9 calls were made to each potential household number, excluding business and non-working numbers.

SAMPLING PROCEDURES

Sampling Design

The purpose of this study was to survey a representative sample of adults in Los Angeles county. The study was also designed to sample subpopulations disproportionately to insure that a sufficient number of interviews for analysis would be completed with African American, Latino, and Asian American respondents. This was accomplished by drawing oversamples from areas with high concentrations of African American and Asian American telephone households. As a result, telephone numbers from these oversamples had a disproportionately better chance of being selected into the sample than those respondents living in telephone households outside the oversample areas. Disproportionate weighting of these cases was done to compensate for the differential sampling. A description of how this weighting was done can be found in the section called "Disproportionate Weighting." In the next section, the construction of the sampling frames for the general sample and oversamples are described.

Sampling Frames

The random digit dial (RDD) sample for this survey was purchased from Survey Sampling, Inc. (SSI). The RDD general sample was drawn from a three-stage stratified sampling frame. In the first stage of constructing the sampling frame, the number of telephone households in Los Angeles county was estimated. In the second stage, the telephone exchanges in the county were identified. In the third stage, working blocks of telephone numbers within each telephone exchange were identified. Finally, when these three stages were complete, two randomly-selected numbers were added to the last two digits of each selected working block of numbers. A specific number of cases was requested for the sample, based upon estimates of expected response and contact rates. A sample of this size was then randomly drawn from the sampling frame described above.

In addition to the general county-wide RDD sample described above, two RDD oversamples of African American and Asian American telephone households within Los Angeles county were introduced into the sample of numbers to be called. These oversamples were drawn by randomly selecting telephone household numbers from telephone exchanges in zip code areas that were estimated to have large percentages of African American and Asian American telephone households. Telephone exchange coverage of zip code areas with large concentrations of African American and Asian American telephone households was based on current information from Pacific Bell telephone company and from projections of 1980 Census tract data. The African American oversample was drawn from zip code areas that were estimated to have 65 percent or more African American telephone households. The Asian American oversample was

drawn from zip code areas that were estimated to have 30 percent or more Asian American telephone households. The total number of oversample numbers needed for each ethnic group was based on estimates of response rate, ethnic population density, and contact rate.

For each of these three subsamples (a single general and two oversamples), the total number of households in the sampling frame had to be estimated in order to calculate estimated selection probabilities. The total estimated telephone households for the general and oversample frames were projections based on 1980 Census tract information, since 1990 telephone household information was not available when the sampling frame was created. The resulting totals of estimated telephone households for each sampling frame is as follows: 2,826,216 telephone households for the general sample; 47,417 for the African American oversample; and 111,240 for the Asian American oversample. Though oversample exchanges overlap with the general sample, oversample exchanges are mutually exclusive with regard to each other; an exchange number from one oversample is not contained in another oversample.

Sample Management

Completed interview goals for each ethnic group were set prior to data collection. Interview goals were as follows:

White.....	625 interviews
African American.....	475 interviews
Latino.....	475 interviews
Asian American.....	225 interviews
Total.....	1800 interviews

The general sample was introduced into the data collection process first, and oversample numbers were not added until the completion goal for white respondents was within reach. Then, African American oversample numbers were introduced. Replicates (new, randomly-selected groups of telephone numbers within a particular sample type) of African American oversample telephone numbers were introduced until it could be estimated that the completion goal would be met using the standard calling protocols. A description of standard calling procedures can be found in the section called "Calling Protocols." Lastly, replicates of the Asian American oversample were introduced to meet the completion goal for Asian American respondents.

From this point on, no more telephone numbers were introduced into the sample. All remaining cases were called until the survey's standard calling procedures were completed for these cases. Latino oversample numbers were not needed because the completion goal for this group was reached during the course of calling numbers from other subsamples. After a completion goal for a specific ethnic group was reached, potential interviews from that

ethnic group were systematically screened out. Specifically, screened-out respondents were asked only four questions, including ethnicity, and these potential interviews were then automatically ended if respondents were from an ethnic group for which the completion goal had already been met.

The following figure shows the distribution of interviews within each ethnic group across each sample type.

Interviews by Ethnicity and Oversample

	<u>General</u>	<u>Oversample</u>		<u>TOTAL</u>
		<u>African American</u>	<u>Asian American</u>	
White	473	28	124	625
African American	80	403	0	483
Latino	232	126	119	477
Asian American	78	18	188	284
Other	7	2	8	17
DK	1	1	0	2
RF	<u>1</u>	<u>7</u>	<u>1</u>	<u>9</u>
TOTAL	872	585	440	1897

Disproportionate Weighting

Weights were used to compensate proportionally for differential selection probabilities. The weighting and normalizing procedure took basically three steps to complete. These steps involved estimating (1) a selection probability, (2) a relative weight, and (3) a normalized weight for each ethnic group within each sample type (hereafter "each ethnic group within each sample type" will be called "each sample group."). The first step was to calculate selection probabilities for each sample group, including the number of screened-out cases for each group. The second step was to calculate sample weights specific to each sample group so that each group would have a weight proportionate to the original number of interviews for that group. The third step was to calculate normalized weights so that the average interview would have the weight of one. This normalization was done so that the researchers could compute percentages accurately using a statistical package like SPSSX.

Selection Probability

When each telephone household does not have the same probability of selection, which was the case in this survey, it is necessary to calculate weights to adjust for the differential selection probabilities. This is done by first estimating selection probabilities for each sample group. The estimated selection probability for each sample group in this survey was calculated by using the following formula:

SAMPLE TYPE: General or Oversample
 ETHNIC GROUP: White, African American, Latino, or Asian American
 and Other

$$\frac{\text{eligible households}}{\text{est. telephone households}} \times \frac{\text{interviews}}{\text{interviews} + \text{screens}}$$

For example:

SAMPLE TYPE -- General
 ETHNIC GROUP -- Asian American, American Indian, and Other

$$\frac{2078}{2,826,216} \times \frac{87}{87 + 0} = .000735$$

Sample type -- General
 Ethnic group -- African American

$$\frac{2078}{2,826,216} \times \frac{80}{80 + 24} = .000565$$

* no cases were screened-out from this sample group,
 hence screens equal zero.

After the selection probability for each sample group was estimated, the reciprocal of the selection probability was taken for each sample group. The reciprocal of the selection probability was taken so that relative weights for each sample group could be calculated. An example of such a reciprocal is:

SAMPLE TYPE -- General
 ETHNIC GROUP -- African American

$$\frac{1}{.000565} = 1769.9115 \quad (\text{reciprocal of selection probability})$$

Relative Weights

After the reciprocal of the selection probability for each sample group was taken, a relative weight was assigned to each sample group. This relative weight for each sample group was calculated by first assigning the weight of 1 to the sample group with the highest reciprocal value (an arbitrary choice), and dividing the reciprocal value for each group by the highest reciprocal value among all the sample groups. For example, the reciprocal value for the Asian American/Other group in the general sample was 1360.5442 and the highest reciprocal value (for African American respondents in the general sample) was 1769.9115. Thus, the relative weight for the Asian American/Other group within the general sample was .7687 (1360.5442 divided by 1769.9115).

Normalized Weights

The next step was to normalize weights for all groups so that the average interview would have the weight of one. This was done by first multiplying the relative weight for each sample group by its total number of interviews. This produced a weighted total number of interviews for each sample group. The weighted group totals were then used to calculate an average weight for the entire sample as follows: the weighted group totals were summed across all sample groups, giving a total weighted number of interviews. This weighted total was then divided by the actual number of interviews, giving the overall average weight. In this case, 1897 completed interviews were divided by 778 weighted interviews. Hence, the overall average weight for this survey was 2.4383. Finally, a normalized weight for each sample group was calculated by multiplying the relative weight for each group by the overall average weight. This produced a normalized weight for each sample group. The normalized weights for sample groups are as follows:

Normalized Weights for Sample Groups

<u>General Sample</u>	<u>African American Oversample</u>	<u>Asian American Oversample</u>
Asian/Other 1.8743	Asian/Other .0392	Asian/Other .0577
White 2.0257	White .0504	White .1470
Latino 2.1193	Latino .0438	Latino .2040
African Am. 2.4383	African Am. .0658	*

* No interviews were conducted with African American respondents in the Asian American oversample.

DATA COLLECTION

Survey Instrument

The instrument used in this survey included approximately 160 substantive questions per interview: approximately 80 core questions were taken from last year's survey; 80 new substantive questions were added; and 7 standard interview evaluation questions were added to the end of the instrument. The total number of different questions on the survey instrument, counting duplicate questions in split ballots and parallel branching, was over 250. The average length of an interview was 38 minutes. A 1992 LACSS questionnaire without frequency distributions is attached to this summary report.

Respondent Selection

Interviewers selected a respondent to interview by asking to speak with someone 18 years old or over currently living in the household who will have the next birthday. Using the "next birthday" method for selecting a respondent (the person to

interview) assumes that the interviewer speaks with a knowledgeable person. If the person answering the telephone is not a knowledgeable person, then the respondent is randomly selected from the number of adults in the household. This type of selection is done by using a chart of random numbers. For example, if there were 3 adults living in the household, the interviewer would assign each eligible adult a number, then select the respondent whose number appears first on the chart of random numbers. This procedure for randomly selecting a respondent was seldom used. The distribution by gender of respondents who completed an interview is 54.9 percent female and 45.1 percent male.

Productivity Figures

A total of 58,064 calls were made to complete 1897 interviews; that is, an average of 31 calls was made per completed interview. These calls were distributed among 10,400 cases. Of these 10,400 cases, 6259 could be considered as eligible or potentially eligible households. Hence, an average of approximately 9 calls were made to each potentially eligible telephone household, excluding business and non-working numbers.

The 1897 interviews are distributed in the following ways:

Interviews by Interviewer Type and Language

	<u>Number of Interviews</u>	<u>Percentage</u>
<u>Interviewer Type</u>		
Students	569	30%
Professional	<u>1326</u>	<u>70</u>
TOTAL	1895	100%
<u>Language in which Latinos were Interviewed</u>		
Spanish	265	56%
English	<u>212</u>	<u>44</u>
TOTAL	477	100%

Final Disposition Codes

After all the cases in the sample were called a sufficient number of times, every case was assigned a final disposition code. Most cases were automatically finalized during the course of data collection. However, some cases required that someone review the history of calls made and assign an appropriate final disposition code to each case. Figure 4 provides a list of final disposition codes and definitions. Figure 4 also shows the number of cases assigned to each final disposition code. Figure 5 provides a summary of those final codes and their totals. Final disposition codes are used to calculate cooperation and response rates, discussed below.

Codebook

A codebook was created using Conversational Survey Analysis program from the CASES CATI system. This comprehensive codebook is included as part of this summary report. For a detailed description of the codebook's contents, please refer to the introduction and table of contents of the attached codebook. Figure 6 is a description of the categories used to classify employed respondent's occupation and industry responses into numeric codes.

SURVEY RESPONSE AND SAMPLING STATISTICS

Cooperation Rate

After every case in the sample was assigned a final disposition code, cooperation and response rates were calculated. The cooperation rate is calculated by dividing the number of completed interviews by the sum of completed interviews plus refused cases. That is, given that an interviewer has someone on the telephone from an eligible household, the cooperation rate indicates how successful he or she was in obtaining an interview from that household. Unlike the response rate, the cooperation rate excludes callbacks from the denominator. As a result, the cooperation rate indicates how successful an interviewer is at conducting an interview with a case that results in either an interview or a refusal. Hence, the overall cooperation rate for the survey may offer some indication of how successful the interviewing staff was at persuading respondents to complete interviews. The cooperation rate for this survey was 55 percent.

Response Rate

The estimated response rate for this survey was 45 percent. A response rate is a way of evaluating data collection activities. The response rate can give the researcher an estimate of how successful the data collection effort was at conducting interviews with eligible telephone households in the sample. The response rate also gives the survey practitioner an estimate of how successful interviewers were at completing interviews with an eligible respondent from an eligible telephone household. The response rate calculation for this survey is as follows, with "CBs" indicating persistently unavailable call backs, "Refs" refusals, "Ill" that the respondent was too ill or incapable to complete an interview, and "away" that the respondent was away for the duration of the survey period:

$$\begin{array}{r} \text{Interviews} \\ \text{-----} = \\ (\text{Interviews} + \text{CBs.} + \text{Refs.} + \text{Ill} + \text{Away}) \\ \\ 1897 \\ \text{----} = .4530 \\ 4188 \end{array}$$

Margin of Error

The margin of error for this survey was plus or minus 3 percentage points, i.e., the chances are 95 in 100 that the value being estimated by the responses to any item lies within a range equal to the reported percentage plus or minus 3 percentage points. This estimated margin of error was taken from Table 14.1.I in Kish (1965, 576).

SRC organizational structure

SRC computer, operating system, and CATI system.

Current schedule of surveys

Brief description of current projects

Budgets, competition, and costs (operations and quality).

Interviewer's role in the SRC

Personnel policies and procedures

Policies -- appearance, smoking, alcohol and drugs, breaks and lunch, shift hours, snacks, liquid containers, outside reading materials, and attendance.

Procedures -- parking, sign-in sheet, bulletin board, mailbox, fire exits, earth-quake provisions, first-aid supplies, water, restrooms, call-station assignments, project assignments, availability sheets, schedules (posted and personalized), timesheets, pay periods, and pay checks.

Job description

Evaluations:

Personnel -- attendance, cooperation, reliability, and efficiency.

Performance -- monitoring, interview rate, call back rate, and refusal conversion rate.

Confidentiality

Attendance

Interviewer availability

Scheduling

Interviewer feedback

Grievance procedures

CATI INTERVIEWER TRAINING GUIDE (continued)

Survey Research Process

Data collection process

Interviewing -- transformation of telephone numbers
Case flow -- calling, interviewing, finalizing, and activating cases.
Case management -- call limits for specific cases.
Distribution of interviews over time curve
The product -- dataset.

Interviewing standards

Training -- standardized interviewing techniques
Monitoring interviewer performance
CATI branching and checks
Verification of interviews

Standardized interviewing techniques

Rapport, reading questions as worded, pace, neutral probes and clarifications, and feedback.
Tape recording of a model interview
Exercises:
 Listening and evaluating
 Probes
 Clarifications
 Feedback
 Practice interview with partner

Refusal conversion techniques and exercises

Introduction worksheet
Introduction in interviewer's own words
Scripts and techniques for converting reluctant and intimidated respondents.
Note-taking style
Calling a refusal back

Computer-assisted telephone interviewing

Summary of important CATI commands: entry level codes for closed-ended, open-ended, other specify, and range responses; and function level codes for jumping back to previously answered questions, changing an answer, noting a comment, setting a call back or a refusal, and sending a case to supervisorhold.

Front end of the instrument

verification of phone number, introduction and purpose of survey, persuasion (if needed), respondent selection, and screening.

Substantive part of the instrument

Questionnaire -- question form, question order, and response category form.

CATI INTERVIEWER TRAINING GUIDE (continued)

Characteristics of Current Survey(s)

Purpose of the survey

Sponsor, completion goal, length, and timeline.
Sample type, area, and size.

Survey instrument (front end)

Interviewer ID number
Interviewer login and dialing instructions
Introduction
Respondent selection process
Screening questions, if any.

Survey instrument (substantive)

Read through entire questionnaire and note:
General ordering of questions
Blocks and series of questions
Open-ended questions
Other specific questions
Questions that may need probes and clarifications.
Time references
Ambiguous terms
Special instructions

Application of CATI Commands and Interviewing Techniques

CATI interviewer training

A supervisor will instruct each interviewer how to go through a CATI instrument by showing them how to use CATI function keys. A supervisor also will assist the interviewer through a series of special CATI operations, including setting a call back, calling a call back, taking a note, setting a refusal, and sending a problem case to be held for a supervisor to review.

Practice interviewing

Each interviewer will read aloud a practice interview. Then the interviewer must conduct a practice interview with a supervisor.

Trainee evaluations

A supervisor must evaluate each interviewer trainee on his/her ability to use CATI interviewing operations and interviewing techniques. Each trainee must demonstrate that he/she can adequately carry out CATI functions and appropriately use standard interviewing techniques. A supervisor must approve each interviewer's performance, using a checklist of activities, before a trainee can begin to call telephone numbers in the sample.

INTRODUCTION

Mentions name	[]	[]
Mentions sponsorship	[]	[]
Confirms number	[]	[]
Establishes residence	[]	[]
Selects appropriate respondent	[]	[]
Mentions study's purpose	[]	[]
Mentions confidentiality	[]	[]
Is pleasant, positive approach	[]	[]
Persuades when necessary	[]	[]
Knowledgeable about study	[]	[]
Expression in own words	[]	[]
Maintains a continuous flow of expression	[]	[]
(does not pause too much)		
Expresses statements, not unnecessary questions	[]	[]

QUESTIONNAIRE

READING QUESTIONS AS WORDED

Reads question(s) correctly	[]	[]
Reads question(s) incorrectly, minor changes'	[]	[]
Reads question(s) with major changes	[]	[]

PACE

Reads question(s) at correct pace	[]	[]
Reads question(s) too fast	[]	[]
Reads question(s) too slow	[]	[]

CLARIFICATIONS

Provides definition(s)/clarification(s) correctly, does not provide personal definitions or interpretations	[]	[]
Provides definition(s)/clarification(s) when necessary	[]	[]

CATI MONITORING FORM (cont.)

YES NO/ITEM

PROBES

Probes for more specific information, attempts
to get clarity and direction [] []
Probes for more information when necessary [] []
Uses neutral probes [] []

REPEATING QUESTIONS

Repeats question(s) correctly, does not make change [] []
Fails to repeat question(s) when necessary [] []

REPEATING RESPONSE CATEGORIES

Repeats response categories correctly,
does not make change, or does not leave out
a category [] []
Repeats response categories when necessary [] []

FEEDBACK

Delivers appropriate feedback, does not
bias responses by expressing encouragement
or dissatisfaction [] []
Delivers feedback regularly, but not all the time [] []

OVERALL CLARITY

Pronounces words correctly, pronunciation does not
lead to (possible) misinterpretation [] []
Reads item(s) in a normal and in an easy to understand
manner (does not use inappropriate inflection or
exaggerated emphasis, lacks intonation, or has
monotone expression) [] []

NOTES

Appropriate note taking style [] []

CATI FUNCTIONS AND COMMANDS

Executes normal functions and commands correctly..... [] []

Equivalent numeric codes follow the alphabetic code. Either code may be used, depending on the processing method. Numbers in parentheses following the occupation categories are the 1980 Standard Occupational Classification code equivalents. The abbreviation "pt" means "part" and "n.e.c." means "not elsewhere classified."

FARMING, FORESTRY, AND FISHING OCCUPATIONS—Con.		PRECISION PRODUCTION, CRAFT, AND REPAIR OCCUPATIONS—Con.	
Other agricultural and related occupations		Mechanics and repairers—Con.	
Farm occupations, except managerial		Mechanics and repairers, except supervisors—Con.	
477	Supervisors, farm workers (5611)		Miscellaneous mechanics and repairers
479	Farm workers (5612-5617)	535	Camera, watch, and musical instrument repairers (6171, 6172)
483	Marine life cultivation workers (5618)	536	Locksmiths and safe repairers (6173)
484	Nursery workers (5619)	538	Office machine repairers (6174)
Related agricultural occupations		539	Mechanical controls and valve repairers (6175)
485	Supervisors, related agricultural occupations (5621)	543	Elevator installers and repairers (6176)
486	Groundskeepers and gardeners, except farm (5622)	544	Millwrights (6178)
487	Animal caretakers, except farm (5624)	547	Specified mechanics and repairers, n.s.c. (6177, 6179)
488	Graders and sorters, agricultural products (5625)		Not specified mechanics and repairers
489	Inspectors, agricultural products (5627)	549	
Forestry and logging occupations		Construction trades	
494	Supervisors, forestry and logging workers (571)	553	Supervisors, construction occupations
495	Forestry workers, except logging (572)		Supervisors; brickmasons, stonemasons, and tile setters (6312)
496	Timber cutting and logging occupations (573, 579)	554	Supervisors, carpenters and related workers (6313)
Fishers, hunters, and trappers		555	Supervisors, electricians and power transmission installers (6314)
497	Captains and other officers, fishing vessels (pt 8241)	556	Supervisors; painters, paperhangers, and plasterers (6315)
498	Fishers (583)	557	Supervisors; plumbers, pipefitters, and steamfitters (6316)
499	Hunters and trappers (584)	558	Supervisors, n.s.c. (6311, 6318)
PRECISION PRODUCTION, CRAFT, AND REPAIR OCCUPATIONS		Construction trades, except supervisors	
Mechanics and repairers		563	Brickmasons and stonemasons (pt 6412, pt 6413)
503	Supervisors, mechanics and repairers (60)	564	Brickmason and stonemason apprentices (pt 6412, pt 6413)
Mechanics and repairers, except supervisors		565	Tile setters, hard and soft (6414, pt 6462)
Vehicle and mobile equipment mechanics and repairers		566	Carpet installers (pt 6462)
X (505)	Automobile mechanics (pt 6111)	Y (567)	Carpenters (pt 6422)
506	Automobile mechanic apprentices (pt 6111)	569	Carpenter apprentices (pt 6422)
507	Bus, truck, and stationary engine mechanics (6112)	573	Drywall installers (6424)
508	Aircraft engine mechanics (6113)	575	Electricians (pt 6432)
509	Small engine repairers (6114)	576	Electrician apprentices (pt 6432)
514	Automobile body and related repairers (6115)	577	Electrical power installers and repairers (6433)
515	Aircraft mechanics, exc. engine (6116)	579	Painters, construction and maintenance (6442)
516	Heavy equipment mechanics (6117)	583	Paperhangers (6443)
517	Farm equipment mechanics (6118)	584	Plasterers (6444)
518	Industrial machinery repairers (613)	585	Plumbers, pipefitters, and steamfitters (pt 645)
519	Machinery maintenance occupations (614)	587	Plumber, pipefitter, and steamfitter apprentices (pt 645)
Electrical and electronic equipment repairers		588	Concrete and terrazzo finishers (6463)
523	Electronic repairers, communications and industrial equipment (6151, 6153, 6155)	589	Glaziers (6464)
525	Data processing equipment repairers (6154)	593	Insulation workers (6465)
526	Household appliance and power tool repairers (6156)	594	Paving, surfacing, and tamping equipment operators (6466)
527	Telephone line installers and repairers (6157)	595	Roofers (6468)
529	Telephone installers and repairers (6158)	596	Sheetmetal duct installers (6472)
533	Miscellaneous electrical and electronic equipment repairers (6152, 6159)	597	Structural metal workers (6473)
534	Heating, air conditioning, and refrigeration mechanics (616)	598	Drillers, earth (6474)

	Textile, apparel, and furnishings machine operators	787	Hand molding, casting, and forming occupations (7754, 7755)
738	Winding and twisting machine operators (7451, 7651)	789	Hand painting, coating, and decorating occupations (7756)
739	Knitting, looping, taping, and weaving machine operators (7452, 7652)	793	Hand engraving and printing occupations (7757)
743	Textile cutting machine operators (7654)	794	Hand grinding and polishing occupations (7758)
744	Textile sewing machine operators (7655)	795	Miscellaneous hand working occupations (7759)
745	Shoe machine operators (7656)	796	Production inspectors, testers, samplers, and weighers
747	Pressing machine operators (7657)	797	Production inspectors, checkers, and examiners (782, 787)
748	Laundry and dry cleaning machine operators (6855, 7658)	798	Production testers (783)
749	Miscellaneous textile machine operators (7459, 7659)	799	Production samplers and weighers (784)
	Machine operators, assorted materials		Graders and sorters, except agricultural (785)
753	Cementing and gluing machine operators (7661)		
754	Packaging and filling machine operators (7462, 7662)		Transportation and Material Moving Occupations
755	Extruding and forming machine operators (7463, 7663)		Motor vehicle operators
756	Mixing and blending machine operators (7664)	803	Supervisors, motor vehicle operators (8111)
757	Separating, filtering, and clarifying machine operators (7476, 7666, 7676)	Z (804)	Truck drivers, heavy (8212, 8213)
758	Compressing and compacting machine operators (7467, 7667)	805	Truck drivers, light (8214)
759	Painting and paint spraying machine operators (7669)	806	Driver-sales workers (8218)
763	Roasting and baking machine operators, food (7472, 7672)	808	Bus drivers (8215)
764	Washing, cleaning, and pickling machine operators (7673)	809	Taxicab drivers and chauffeurs (8216)
765	Folding machine operators (7474, 7674)	813	Parking lot attendants (874)
766	Furnace, kiln, and oven operators, exc. food (7675)	814	Motor transportation occupations, n.s.c. (8219)
768	Brushing and grinding machine operators (pt 7477, pt 7677)		Transportation occupations, except motor vehicles
769	Slicing and cutting machine operators (7478, 7678)		Rail transportation occupations
773	Motion picture projectionists (pt 7479)	823	Railroad conductors and yardmasters (8113)
774	Photographic process machine operators (6863, 6868, 7671)	824	Locomotive operating occupations (8232)
		825	Railroad brake, signal, and switch operators (8233)
		826	Rail vehicle operators, n.s.c. (8239)
			Water transportation occupations
		828	Ship captains and mates, except fishing boats (pt 8241, 8242)
		829	Sailors and deckhands (8243)
		833	Marine engineers (8244)
		834	Bridge, lock, and lighthouse tenders (8245)
			Material moving equipment operators
		843	Supervisors, material moving equipment operators (812)
		844	Operating engineers (8312)

Occupational Classification System

Occupation code	Occupation category	Occupation code	Occupation category
	OPERATORS, FABRICATORS, AND LABORERS—Con.		OPERATORS, FABRICATORS, AND LABORERS—Con.
	Transportation and Material Moving Occupations—Con.		Handlers, Equipment Cleaners, Helpers, and Laborers—Con.
	Material moving equipment operators—Con.	869	Construction laborers (871)
845	Longshore equipment operators (8313)	873	Production helpers (861, 862)
848	Hoist and winch operators (8314)		Freight, stock, and material handlers
849	Crane and tower operators (8315)	875	Garbage collectors (8722)
853	Excavating and loading machine operators (8316)	876	Stevedores (8723)
855	Grader, dozer, and scraper operators (8317)	877	Stock handlers and baggers (8724)
856	Industrial truck and tractor equipment operators (8318)	878	Machine feeders and offbearers (8725)
859	Miscellaneous material moving equipment operators (8319)	883	Freight, stock, and material handlers, n.e.c. (8726)
	Handlers, Equipment Cleaners, Helpers, and Laborers	885	Garage and service station related occupations (873)
863	Supervisors; handlers, equipment cleaners, and laborers, n.e.c. (85)	887	Vehicle washers and equipment cleaners (875)
864	Helpers, mechanics and repairers (863)	888	Hand packers and packagers (8761)
	Helpers, construction and extractive occupations	889	Laborers, except construction (8769)
865	Helpers, construction trades (8641-8645, 8648)	999	OCCUPATION NOT REPORTED¹
866	Helpers, surveyor (8646)		
867	Helpers, extractive occupations (865)		

¹ Code used when not-reported cases are not allocated.

Industrial Classification System

Equivalent numeric codes follow the alphabetic codes. Either code may be used, depending on the processing method. Numbers in parentheses following the industry categories are the SIC definitions. The abbreviation "pt" means "part" and "n.s.c." means "not elsewhere classified."

Industry code	Industry category	Industry code	Industry category
